AT THE MOVIES

DIE ANOTHER DAY

All of the pieces are in place for a formulaic and unique new offering in the James Bond series. A high-speed hovercraft chase, through a minefield marks the beginning of James Bond embarking on his latest mission. From Hong Kong, to Cuba to London, Bond circles the world in his quest to unmask a traitor, and prevent a war of catastrophic proportions. On his way, he crosses paths with the beautiful Jinx and Miranda Frost. Hot on the trail of bad guy Gustav Graves and his ruthless right-hand man Zoo, Bond travels to Iceland into the villain's lair, a palace built entirely of ice. There he experiences, first-hand, the power of a high-tech weapon. Ultimately, this leads to an explosive confrontation back in Korea, where the mission began. The studio is so sure of this film, a spin-off flick starring **Halle Berry's** character Jinx is being considered, the first ever for the bond series.

EIGHT LEGGED FREAKS

Residents of a rural mining town discover that an unfortunate chemical spill has caused hundreds of little spiders to mutate overnight to the size of SUV's. The movie is kind of a spoof of 1950s B giant bug science fiction movies, replete with grown-ups who don't listen to their kids when the young ones figure out what's really eating all the farm animals and pets in town. The computer-generated spiders are a gas and the tongue-in cheek attitude works well throughout the film. A fun filled thrill to just sit back and enjoy.
